# I-Extractor

Overview

I-Extractor is a PDF data extractor tool to extract quality data.
I-Extractor helps to get PDF data output in three different formats JSON, XML, and Text data (key-value pair).
Which can be consumed and populated inside consumer application to reduce manual data entry.
This tool helps to extract data from different types of PDFs:

Editable PDF | Non Editable PDF | Scan/Image PDF | Handwritten PDF

Business Use:

This tool can be utilized to train Documents such as ACORDs, Carrier Supplement Forms, MGA's in house application forms etc. Once a document is trained, this tool can extract the data from the filled application and provide output in various formats which ultimately improves end user's efficiency.

Some examples:

- Create new submission in ALIS, Rater, and PUMAA
- Fill risk information in ALIS
- Call I-Extractor API from any third party system to extract and populate end user system.
- Any other Document data to be extracted.
