SPIDER

OVERVIEW

Our SPIDER product allows a wholesaler to receive multiple quotations from different standard carriers with a click of a button. The SPIDER system achieves this by sending data off a single application for a particular risk to multiple carrier websites with whom the wholesaler has a working relationship. As a premium from a particular carrier is approved, the Wholesaler can use the Spider system to issue the policy directly from the carrier website or through our system.

DATA FEEDER	SPIDER ENGINE	POLICY ISSUANCE
Takes user input and processes it to provide the spider engine with the information it needs to obtain premiums from multiple carriers	Goes to the web and interacts with carrier websites to procure premium information	Enables MGAs to bind approved quotes and issue policies directly from the carrier website
